

Block A Certificate

Claim Faithfulness

VERDICT: PASS

Scope

Verify that every quantitative and structural claim in the manuscript abstract, introduction, and theorem statements is faithfully reflected by the body of the paper and its proofs.

Method

Cross-checked 9 claim families against their supporting statements and proofs; each claim was matched token-for-token and semantically against its source.

Findings

- All 9 claim families verified **EXACT** (no drift, no overstatement, no unsupported generalization).
- No mismatch between headline claims and proved statements.
