

Block B Certificate

AX1/AX2 Literature Scope

VERDICT: PASS

Scope

Confirm axioms AX1 and AX2 are faithful to the cited literature and are not silently strengthened beyond what the literature establishes.

Method

Traced AX1 and AX2 to their literature sources; compared the invoked form against the proven vs. conjectured statements in those sources.

Findings

- AX1 faithful to literature; not overstated.
- AX2 faithful and invoked in its **proven** form (density $0.9 + \epsilon$), not the conjectured $0.75n$ form.
- No claim in the manuscript rests on an unproven strengthening.

Evidence pointers

RESULTS/blockB_AX1_AX2_literature_scope/README.md

AX2 = proven $0.9 + \epsilon$ (not conjectured $0.75n$)
