

Block C Certificate

Bulk/Sparse/Corridor Proof Attack

VERDICT: PASS

Scope

Adversarially attack the three proof regimes — bulk, sparse, and corridor — searching for logical gaps, invalid inferences, or hidden assumptions.

Method

Executed 8 distinct proof attacks targeting the boundary conditions and inductive steps of each regime.

Findings

- 8 attacks executed; **0 vulnerabilities** found.
- Bulk, sparse, and corridor arguments withstood all attacks.

Evidence pointers
